Career Objective

Computer Science Engineering student at Bharati Vidyapeeth (Deemed to be University) with a strong interest in Machine Learning, Deep Learning, Data Science, and software development. Proficient in Python, Java, C++, SQL, and data science libraries, with hands-on experience developing machine learning and deep learning projects. Seeking opportunities to apply AI/ML skills to real-world problems while continuously strengthening problem-solving and software development abilities.

Education

Bachelor of Technology (B.Tech) – Computer Science Engineering

2023 – 2027

Bharati Vidyapeeth (Deemed to be University), Pune

CGPA: 9.29 (Till 6th Semester) | Pune Maharashtra

Higher Secondary Certificate (HSC) – CBSE

Shri Krishna Public School, Indore

2022 – 2023

Percentage: 71.40%

Secondary School Certificate (SSC) – CBSE

St. Vincent Pallotti School, Indore

2020 – 2021

Percentage: 87.3%

Technical Skills

Core Concepts

Programming: Python, Java, C/C++ (basic)

Web: HTML, CSS, JavaScript

Databases: MySQL, MongoDB

Data Science: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn

Projects

1. Gram Panchayat Data Management System

Developed a web-based system for village data management, entry, and retrieval. Implemented structured storage and search features using HTML, CSS, JavaScript, PHP, and MySQL.

2. Web-Based Compiler Calculator

Flex, Bison, C, Node.js, Express.js, JavaScript, Docker

Developed a web-based compiler calculator that performs lexical analysis, syntax parsing, and arithmetic expression evaluation using Flex and Bison. Built a Node.js backend to visualize tokens, Abstract Syntax Trees

Live Website: <https://flex-bison-calculator.onrender.com>

3. Wheat Leaf Disease Detection Using ResNet50 (2024)

Created a deep learning-based web app using ResNet50 to detect wheat leaf diseases from images for early crop diagnosis and management.

4. Car Rental Management System

Developed a GUI-based car rental system using C++ and wxWidgets to manage car booking, returns, and availability. Implemented priority queues and file handling to store customer and vehicle data.

GitHub: <https://github.com/rohit6863/carrentalsystemwxwidgets>

5. CPU Scheduling Algorithms Simulator

Implemented FCFS, SJF, SRTF, and Priority scheduling algorithms and visualized process execution using dynamic Gantt charts. **GitHub:** <https://github.com/rohit6863/CPU-Scheduling-Simulator>

Certifications

NPTEL – Databases

NPTEL – Introduction to Machine Learning

BigData101 cognitive class

ESF IIT Madras Workshop on Cybersecurity and Blockchain
